Summary

This is to represent the Ytterbium atoms in the crystal structure $\text{Yb}_2\text{Si}_2\text{O}_7$. It is simply two layers of honeycomb "atoms"

I created this model to represent the Ytterbium atoms in the crystal structure $\text{Yb}_2\text{Si}_2\text{O}_7$. It is simply two layers of honeycomb "atoms", where the honeycombs have two of the four sides shorter than the others. Thought others might be interested or have ideas for how to remix this!

I printed with a brim for bed adhesion, with 0.1 mm layer height, and no supports.
