GoPro compatible mounts for V-Slot 20x20mm extrusion.

Objectives of this design were:

1. Single attachment point to the extrusion
2. Minimize flex of the mount given objective #1
3. Leave the non-mounting sides of the extrusion clear
4. Allow some tilt (how much depends on the mating camera mount) in the direction of the extrusion attachment when a short knob like <https://www.thingiverse.com/thing:252554> is used to attach to the extrusion.

Two versions are provided, with the nut retainers on different sides, to allow for different situations.
