### Summary

This is a precision case for the Moyina FT232 USB to TTL Adapter, USB to Serial Converter Case.

Inspired by the original design by [plasmata](#) this case is redesigned from the ground up to fit the current [Moyina FTDI to Serial USB adapter](#). It exposes the pin markings on the board for easy connection ID and is a bit shorter than the original.

I designed it so that it can be multi-colored (as shown in the example picture). If you prefer single color just break it into parts in your slicer and remove the letters. This will then print with 1mm recessed letters.

Bottom and lid friction fit.
