Not so much a remix as it was inspired by **PushingPixels'** PG7 Cable Cover as the CAD is my own, but the credit definitely goes to **PushingPixels** for the concept.

This is an adapter for a CAN umbilical to mount to the gantry using PG7 cable gland. It fits nicely in the space where the gantry wiring was originally intended to route. The differences between the original by PushingPixels and this one are the hole position and the height. This version has more thread engagement with the cable gland.

### This remix is based on
