## Summary

used for medical school stuff, can be used as a shoulder to cry on ... :(

I used this model to understand the human shoulder in school better. I thought it would help to spread the word to others by uploading this creative commons here. I have not made any changes to this model. I only sized the model down to 50 and 70 percent of the size!

side note: the files are really **big**, so you will need a good computer to download the stl.

### Credits to :

### For print settings:

can use any kind of material

You will need support all over the model because of the difficult shape.

for layer height can go too big because the wall becomes too thin resulting in zero thickness.
