A swirly extrusion Indicator. Three colors with no MMU. Two 3x8 magnets glued together, then glued into the recess on the back.

Print instructions

Uses 3 (M600) filament swaps. Start with black (or whatever you want the background to be), then whatever you want the swirl to be, then finish it off with the center nozzle topper color. As you can see, I used black, tangerine, then gold. No supports.
