Hello from HiddenStashCreations

this is my foregrip Lipo battery box made for the Hgoc Gel Blaster on amazon, to convert it to lipo (the https://www.amazon.com/dp/B0B252M2CD?ref=ppx_pop_mob_ap_share)

but should work well with any toy

35x30x146(mm) works well with Out of darts 2s & 3s 950mah lipos (3s:<https://outofdarts.com/products/graphene-3s-950mah-65c-lipo-pack-xt-60-ood-exclusive>)(2s:<https://outofdarts.com/products/graphene-950mah-xt60>)

wire hole is yours to place, negative volume added to the model in the slicer can add a simple hole or box in the either of the doors or body....enjoy

Recommended Print: 40% 5 walls PLA or PETG

Supports are light and simple: smart fill 2 spots on the main body and done

grip profile was left open for stippling and works well

there is also a make your own thumb screw for m2x16mm for the rear door

Hardware needed:

M2 heat insert 8*3.5(3)

M2 flat top: 16mm(1), 8mm(2)
