Hi All,

Here is my new design for a notebook vertical stand, which allows for the addition of a rear cooling fan... or not.

Additional information (Different options are available for the assembly):

- Low profile vertical stand without cooling fan: Print the front piece twice, with or without the extra base extension.
- Stand including an 80mm or a 120mm fan: Simply pick the right STL for the rear part from the list.
- Thicker notebook? Try scaling the "spacer" Z dimension in any slicer software. Please note that the attached spacer is 17mm thick, so you might need to do a bit of math.

I hope you enjoy it!

A few more words:

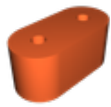

I really love designing and 3D printing, and I am incredibly happy to see how some of my projects are particularly popular online. My designs will never be for sale, however, if you appreciate my design, please consider supporting me with a tip. Thank you!
