Summary

The original dust port is not compatible with metric hoses. This one let you use both 27mm and 36mm.

This port uses the same screw that comes with the planer. It allows you to use both 27mm and 36mm hose attachments. The perpendicular ejection makes it a bit bulky with the hose but it fits in my tool box better this way.

You need supports for a small portion for the print. It might bridge OK but I haven't tried it that way.
