Hello, This is a model I designed to hold the Bambu Lab X1 magnetic build plates. It fits both the cool plates and PEI textured plates, but it should fit any other X1 plate. It was designed to be printed in one piece on the X1 diagonally. I have included a 3mf file with the correct orientation exported from Bambu Studio (may have trouble importing into Prusa Slicer). I also have included the STEP file so that anyone can modify it if they like.
