Printing

- All parts can be printed without supports.
- Several parts have very minimal contact with the build plate. If you don't have very good adhesion, add a brim.
- Optional: Add a slight fuzzy skin on snow parts for some nice texture.

Customization

Chest options

- **Chest** - This perfectly round part is the best choice if adding a scarf. The uninterrupted surface will allow the scarf to twist around freely.
- **Chest with Arm Holes** - Use this option if you plan to add the optional arms

Accessory options

- **Scarf** - A long scarf that runs along the side of the snowman.
- **Collar** - A rough textured ring that, when coupled with chest part with the same color, looks like a sweater.
- **Arms** - Add arms for a classic snowman look.

Hat options

- **Top Hat** - Classic snowman top hat. Pause the print to print the band in a second color.
- **Wool Cap** - A giant sized remix of a [Wool Cap](#) designed by [Wacky3DPrints](#).

Magnets

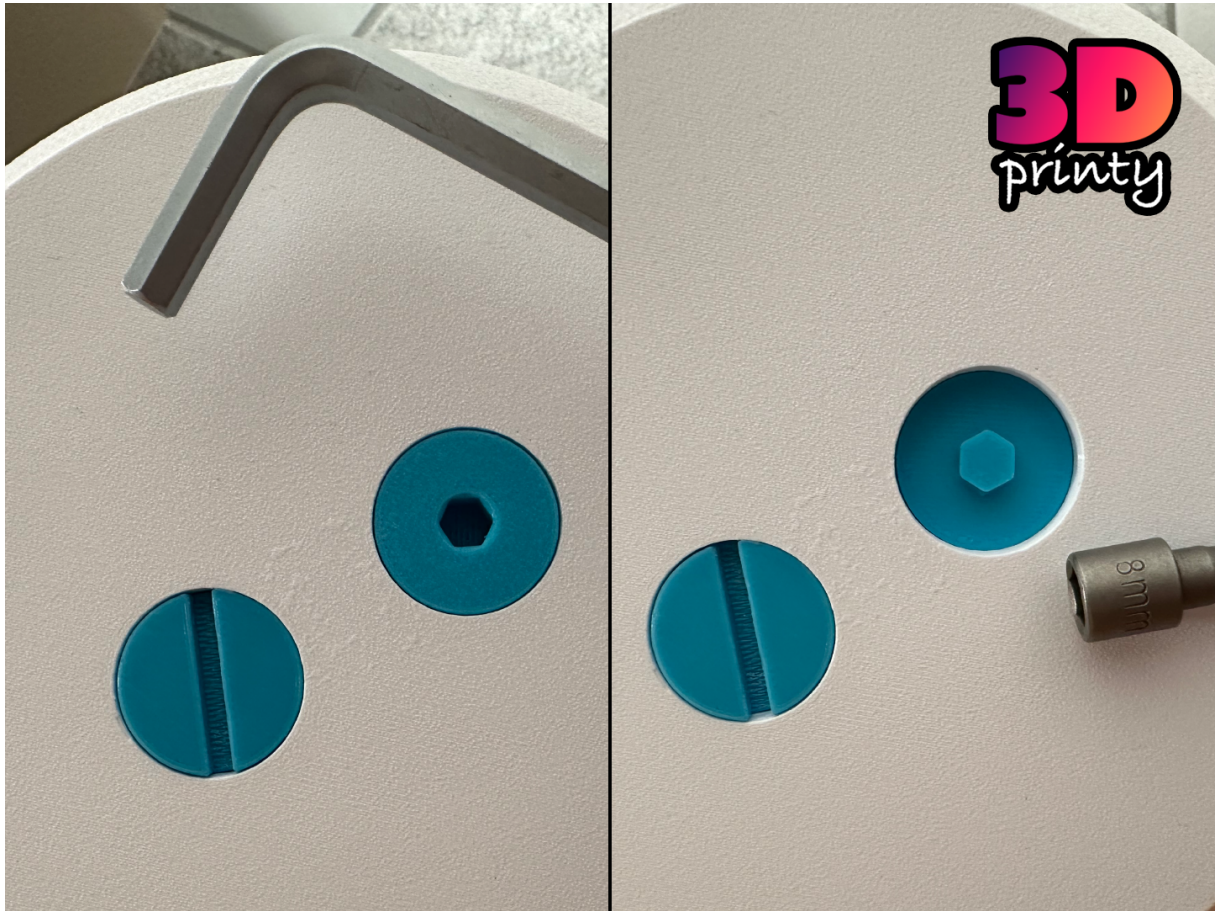

- Add 6x3mm cylinder magnets instead of glue to all face and accessory elements so they can be switched out in the future.

Assembly

The main body of the snowman is held together by TPU, fishing line, sewing elastic, or any other thin flexible item that can span between the head and the bottom and tie into a knot.

See the [video above](#) for a step-by-step demonstration of the process.

Update - New Bolt Options!
