Replacement I/O Door for the back of PowerBook 180. (Might fit other models, let me know; i only have the 180.)

Use this to replace a missing door, or remix into a custom version. Share & enjoy.

I printed from PETG; the little side pegs are surprisingly strong.

This is quick work; the little bullets that emphasize the hinge point could mate better to the original case. But this is a good start: the door fits great, the upper radius matches, and the little latch snaps into place.
