## Summary

Remix of Giandos modell for an utility knife snap-of-blade.

[Hobby & Makers](#) > [Tools](#)

Tags: [marking](#) [gauge](#) [markingtool](#) [utilityblade](#)

Another remix of Giandos modell, this time for an utility knife snap-of-blade. Use it to cut a clean line for mortising etc. Added a safety guard to prevent bloodshed when handling it :-)

Remember that the gauge only cuts clean in the blade direction, if you move it the opposite direction it will tear the wood.

U need Giandos original "Central Body" and "Screw" models

The blade is hold in place by a 10 mm M3 screw. The model has a threaded hole for M3.

Printed in PLA, 3 walls, 35% infill, no supports or brim
