## Summary

A mount for the HyperPixel Touch Screen designed to mount unto the Ultimate Prusa Casing.

[3D Printers](#) > [3D Printers - Upgrades](#)

I use the Hyperpixel touchscreen along with Octodash and I am very pleased. I also like the Ultimate Prusa case. Unfortunately, the screen cannot be installed in the case. So I needed a mount that would allow me to use the Hyperpixel screen. The inspiration was the model <https://www.printables.com/model/206363-ultimate-prusa-casing-wyze-v2-camera-mount> , The case is a project <https://www.printables.com/model/107548-raspberry-pi-32-octopi-case-with-hyperpixel-touch->

The housing rests on the handle, if you want it not to move, glue it with super glue. The screen in the housing is quite heavy, so the handle must be solid. I used Spectrum PLA Matt filament, 4 circuits and 30% fill.
