I tend to use several nozzles on my ender. To keep track i usally put sticker on my bullseye. That could be better so i made a slicer with 0.6 and 0.4. Whenever i change the nozzle i only have to slide left or right to see what nozzle is installed.

I added a blank one so you can enter your one text and customize your bullseye.

You have 3 files, A base which fits snug in de bullseys space, a slider and a frame.

Print the all using filament change to use other color for lettering, place slider in slot an glue (very little) the frame on the base while sliding so you dont glue the slider also.

Print Settings

Printer Brand:

Creality

Printer:

Ender 3 Pro
