Tags: clip

clips designed to allow surge strip to be hung on the end of shelving such as the Extreme Garage shelving from Menards. In order to work, the shelving needs to have square holes on the ends of the supports, spaced 76mm (3") apart, and the surge strip needs to have screw holes 8mm (5/16") spaced 34.925mm (10 3/8") apart.

If those measurements don't work, then the scad file should help with rendering new clips with the needed measurements.
