## Summary

What is left on the spool? This is an easy print to see how much is left on your Prusament Spool.

The model was drawn in Fusion360.

I did a Filament change at 0,6mm layer height. If you don't know how to change colour [here](#) is a video where it is explained.

This little tool isn't a 100% accurate, but it should give you a good feel on how much is left.
