I have an SD card holder which holds the queue of my next print jobs (model here <https://www.prusaprinters.org/prints/31652-sd-card-holder>).

I mark the enclosure door with the SD card contents (Lack marker holder here <https://www.prusaprinters.org/prints/32754-lack-table-dry-wipe-marker-holder>)

I use my dry wipe marker to write on the lack table door what print file is in each of my SD cards. As I progress through these and add more (when I'm busy), I wipe the old writing off.

I couldn't find a suitable solution for this need that exactly fit my purpose so I designed a new one.

The holster is 50mm wide so fits nicely on the Lack legs. I fold over a piece of toilet paper and hold it on with an elastic band.

This works surprisingly well.

When a print is complete I wipe it off (Lack eraser here <https://www.prusaprinters.org/prints/32753-lacktable-whiteboard-eraser-holster>)

Print instructions

Print the holster upright on the bed, no supports.

Print the eraser with the 'wipe side' on the bed, use support on build plate only.

I reckon you could get away with any material, any layer height and any infill density.

This not a challenging print.

Let me know if you like it.
