### Summary

Hard Drive shaped box to firmly mount BlueSCSI into Macintosh PowerBook 180

Tags: [macintosh](#) [powerbook](#) [bluescsi](#)

the PowerBook 180 case interior is intriguingly minimalism. There is very little actual structure; some components are held in place simply by being stuffed into the case itself. The hard drive has no sled, or even screws—only two tiny pegs and a sort of “cage” that really just keeps the HD still until the case snaps around it.

Using any alternative drive requires an adapter, so i made this block.

This holder is based on the original boxy little hard drive. I got a blueSCSI for this project, so i used that for the prototype. (I will make a ZuluSCSI version when \*cough cough\* i can get a 2.5" ZuluSCSI board...)

please share & enjoy.
