The K3P4 rover by Team RoverOva. This rover is built by student from VSB - Technical University of Ostrava and has participated multiple times in the European Rover Challenge and Anatolian Rover Challenge. And now you can print a small version of it to sit on your table!

This particular miniature is modeled after the 2022 version of our rover (it changes quite abit each year).

The model is split into multiple parts that are then glued together to complete the assembly.

The wheel rims are just pushed into the wheels, no gluing needed.

More about the rover at rover.vsb.cz
