No supports needed. Make sure that the bed is clean and the first layer adheres properly. It is a good torture test for print bed adhesion and filament retraction.

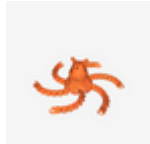

Good luck and happy printing ! ^-^

*Version 1.35 has improved legs so they adhere easier and make for an easy release from the bed platform. Attached g-codes are thoroughly tested and mastered for perfect results. The one for MK3S has a pause at the beginning, followed by an Easter egg.

Any comments and photos will make my day :)

Thx
