This was an unintentional remix. I actually started a design for a pill container on my own, and then found this one, which was very similar! I reverse engineered their lid design, as my first one was trash, and then I improved upon it as best I could

It is a bit bigger than the original, but I did that on purpose. The original could hold 2 of my medium sleeping pills, while this one can hold 13. The original held 1 of my huge headache pills, while this one holds 8.

I also ran into an issue with the original where upon first use, the threads sheared off instantly, and my pills were stuck inside. I made sure to make the threads much stronger on this model

Overall, I did not INTEND to remix this, but it was so similar in the end, and I referenced it enough, that I felt it was fair to label it a remix

This remix is based on

Keychain Pill Container v3
