Turn your favorite trading cards into a great display piece! Ultra Pro One Touch cases do a great job of emulating the look of a graded card, so I wanted to make a simple and stylish way to show them off on my shelf.

Stands are printed in Overture Matte Black PLA and print quickly with no supports. The gems are very small and can be tricky to print however. I had a lot of luck by setting my layer height to 0.1 mm, slowing the print way down, and using lots of glue stick for adhesion. Best of luck on your prints: I hope these help make your collection look awesome!
