Description

This Raven Skull is sculpted by my daughter Nomad Sculpt, for an art project at school. It is not anatomically correct, but it does make a nice decoration piece.

Print instructions

As the model is not optimized for 3D printing (it's my daughters second sculpt), I printed the Skull with supports and 0.15 mm layer height in the orientation provided. I used PrusaSlicer's Paint-on supports and soluble filament to create a solid base for printing and still have a smooth surface.
