This is a minimalistic Raspberry Pi Case, designed to fit right behind the display of the Prusa Mini. It fits right on the aluminium extrusion and can be secured with a m3 screw and nut. (can be customised with the attached fusion file).

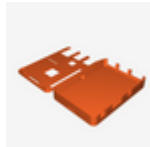

I aimed to make the mount as unnoticeable as possible. Therefore I recommend to print it in black PETG or PLA.

Everyone who does not have T-Nuts, can use something like [this](#) to attach the case to the Prusa Mini.

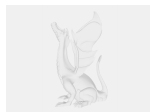

Print instructions

I recommend to print the parts separate.
