Welcome to my SECOND released project for Thingiverse!

I normally do more industrial type projects, but had a request from a few people in my circle for a well put together modular cup holder (laptop saver ;>).

This will be the first wave of items compatible with my clamp and dovetail system (there are several fun things on the way).

The clamp is and will be universal across several releases (it is the same here as it is in the cup holder project) and is currently designed to accommodate a 5mm - 35mm thick surface. The clamping printed bolt is pre-shrunk in x/y by 4% for ease of use, your results might vary depending on your personal settings and machine.

This Hanger will accommodate several generations of controllers in both Xbox and Playstation flavor as well as handle most all headphones with wide or slim bands. It is very robust in feel and function.

All models are printable with no supports, although your machine and slicer settings will need to be able to handle bridging and overhangs.

The file type is .3mf as it has the highest quality conversion, the single .stl file is there as thingiverse wants at least one of their required file types to publish the item.

I hope you enjoy, Happy Printing!

I am doing this partially for fun, as well as hopefully showcasing my ability to design well put together projects in terms of function, printability and aesthetics. Please follow this page to keep up with future releases.

If you enjoy my work, under no obligation whatsoever, feel free to make a small donation to help me keep my design tools and equipment up to date and afford myself the time to continue with this journey!

Thank You Sincerely!
