This is arguably the best tray for desiccant beads for the AMS of Bambu Lab.

The lid has a recessed grip where a lamella of the tray sticks through. this allows to easily take out the entire tray including the lid but without the risk of opening the lid and scatter the beads everywhere. it fits loosely in the rear recess of the AMS where desiccant bag usually sits.

the lid of this tray is held down by the original lid of the AMS.

that means, you don't need to reach tight tolerances while printing this tray.

it can be a loose fit.

it doesn't come apart, when you take it out, no matter how rough you do

so.

and if it is in place and the original AMS lit is closed, you can shake the AMS and nothing happens. Although i don't recommend to do so, for obvious reasons.

Update:

New Lit available - please use V03.
