Update July 27, 2023

I uploaded a new version that uses twist wire (0.8mm, 1mm, and 1.2mm). If you want me to support more twist wire diameter or screw eyes, add a comment with your request.

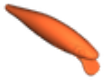

This lure has two internal chambers, the one in the back is for buoyancy, and the one in the front is a rattle chamber, you can pause the print before it closes, insert some steal balls, and resume the print.

Check out this lure in action:
