Designed these inspired by https://www.thingiverse.com/thing:2133070.

The original one printed great on Esun PLA+,but i wanted a different color and,printed on my generic red pla,that resulted in clips breaking when i was installing. So i decided design a new one using with some little differences to print well on my filament.

Made some ajustments to cable slots,made one smaller to work better with the shifting cable and one larger to hydraulic brake hoses.

After some shots i got a good fit and easy to print model. And it worked on my generic PLA,but with time the PLA creep and the clips fall loose,so the ideal is to print with petg or abs.

### Print Settings

**Printer Brand:** Creality

**Printer:** Ender 3

**Rafts:** No

**Supports:** No

**Resolution:** 0.2

**Filament:** PETG,ABS
