This model allows a dial indicator to be attached using the stock SV06's fan mounting bracket screw holes, presuming the fan has been upgraded and relocated. A rear-mounted holder would be stiffer, but if you've already taken that space up (say, with the aforementioned fan upgrade...), this gives you an option. You can re-use the stock fan bracket's screws. It's a bit close to the hotend, so I'd suggest printing it in at least PETG. The screw holes have a one layer thick bridge that can be drilled out easily. A step version of the model is included to allow for easy modification.
