A pan flute, also known as panpipes or syrinx, is a musical instrument that works on the principle of the closed tube. It consists of multiple pipes that gradually increase in length (and sometimes girth) from one end to the other. Pan flutes have been popular as folk instruments for centuries, with various varieties found in cultures around the world.

I think my idea of creating a "**Whistle Pan flute**" by connecting whistles of different lengths in a line is an interesting and creative one. While it may not be a completely unique idea, it certainly has the potential to produce a unique and fun sound. By carefully selecting and aligning the whistles, it may be possible to achieve a greater range of notes than a traditional pan flute. It would be exciting to see how different materials

and shapes of whistles could be used to create even more variations in sound.

This model is in progress and I will continue to tune until I have a model that gives a great **Whistling Flute sound**.
