link to the **dogTagCustomizer**

This online dog tag customizer is the perfect tool for pet owners who appreciate simplicity and minimalism. With a simple and easy to use interface, you can customize your dog's tag with the essential information. Try the customizer for yourself and create a personalized tag that perfectly matches your pet's style and personality. The idea is to put the name on the front and a phone number on the back. But you can put anything you want.

I'd recommend printing it in two colors using the PrusaSlicer's built-in color changer option to make the text stand out.

The online customizer has been created using trCAD (scripted CAD) and paramate (API to port it to a website). They are currently looking for beta users. An account is free for non-commercial projects.
