updated 6. 4. 2023 | published 6. 4. 2023

## Summary

helps to precisely drill 18 mm chipboards, top and edge

[Hobby & Makers](#) > [Tools](#)

Some sizes are 0.2 or 0.4 mm larger to make it easier to insert the boards into the template. The first version created to precise dimensions of 18 mm proved to be more difficult to use and there is a risk of scratching the chipboard
