Summary

Just another DS18B20 Mount. I needed such a mount for my heating pipes but couldn't find one.

Just another DS18B20 Mount. I needed such a mount for my heating pipes but couldn't find one.

So I simply designed that mount, which holds a DS18B20 in place with 1 or 2 zipties. I used shrink tube on the lower part to hold the sensor in place and protect the sensor contacts.

works like a charm :)
