**Self adjusting bike handle clamp stand V2 for handle bars, to do things on the fly on your flipped bike.**

Designed for 32mm handle bars, but should fit on pretty much any size

**For one set you additionally need:**

- 4x M6 x 16mm Socket Button Head Screw
- 4x M6 x 18mm Washer
- 2x Rubber Band to hold the Clamps on the handle bars

I printed mine with 0.3mm layer height out of PLA, it's super ridgid!

**Advantages:**

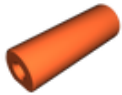

- easy attachment

- self adjusting
- safe standing
- transportable
- lightweight and small
- very easy and rigid print
- endures every bike (tested with my weight, about 80kg)
