A baseplate that allows the creation of every imaginable accessoire for your Bineer Board Tool Wall.

These Bineer Boards look cheap (cause they are) and the tool organizer that came with it are not great ether (at least IMO)... but they are perfect for 3D printed accessiores wich i will upload too when i made something usefull ;P

If you consider buying these boards on Amazon, just take the ones with the containers, cause they are as usefull as fragile and design the rest yourself like a real maker :D

Happy Printing
