Print two swing drum balls. Recommend light supports for the swing drum.

Additional needs:

- Two 10cm lengths twine, string, yarn, ribbon, etc. to attach the balls

Assembly:

- Thread the twine through one of the balls and tie a knot at the bottom of the ball.
- Thread the opposite end of the twine through one of the holes in the swing drum. Adjust the length so the ball hits the face of the swing drum. Tie a knot to secure. Trim excess twine.
- Repeat with the second ball, but this time threading the twine through the swing drum in the opposite direction of the first. You'll end up with a knot on each side of the swing drum.
