Round pill container with qucik screw lid and dessicant holder in lid. I designed this exclusively for my own specific, egoistic needs and requirements.

I needed the right size container for about a months use of tablet - I have reached that age where tablets are a part of everyday stuff!!!

I cannot stand blister packaged pills, but only two of the eight variants I swallow daily, can be purchased in containers. So I set out to make my own, that way my OCD can also have some rest when I look at the shelf where I store these...

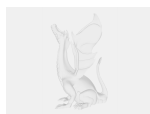

The lid has to come off quickly and it has to be of a size that can be gripped properly with fingers plauged with arthritis... It shall also not fall to the floor, as I would have to bend down and blood will rush to my head, causing all sorts of disturbances!

The thread is a multiple start thread, making proper alignment of the lid a breeze and it is off and on with only $\frac{3}{4}$ turn.

The dessicant holder is stolen directly off one of my pharmacy bought containers, well the whole design actually is, more or less, tweaked here and there for a sublime handling and viewing experience.

Since I have already a lot of these dessicant containers, I did not design one, for myself. I did however include a f3d file of the dimensions matching the ones I have, which, for obvious reasons, will fit in the lid. These kind of dessicant containers can most probably be found on amazon - they seem to have everything ever thought of, for sale.
