Summary

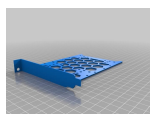

I had an old phone knocking about and decided to use it as a resource monitor.

[Gadgets](#) > [Computers](#)

Using the vertical GPU mount on most cases you too can have a sweet resource monitor for your PC, you will need to download some software called **modbros** for the PC and the same on your android phone from the play store (probably works on Iphone too, not sure). get all that set up then simply push a USB cable throught the hole in the PCI cover slot.

You will have to make your own profile/display but its not hard.

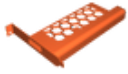

This remix is based on

PCI hard drive mount
