This Panel Due 5i mount + enclosure fits snugly on top of the bottom plate of the tool changer and has a display angle of 45 degrees to maximize visibility. There is a small 10x7.5 hole on the bottom plate, and you can easily hide writing under the tool changer bottom plate.

You will need 8 M3 Screws (10-12 mm), and, optionally, an M3 Tap to assemble this.

You can read more about my setup here: <https://shivdeepak.com/setting-up-e3d-tool-changer>
