An OpenSCAD model of a dog tag with a clip on design. The clip makes it very easy to attach to your dog's collar. It should print without supports, but your mileage may vary depending on your printer.

Do a color change to create a stunning dog tag for your best friend. I recommend color changes at layer heights 3.2 and 6.8. Ironing the top layer only gives it a nice smooth finish.

I found that PETG produced the most secure clip. I encourage you to play around and see what works the best for you.

Model may need some tweaks if you increase the size of the dog tag. This is just a simple model.

I recommend you use 4 perimeters for this model and 15% infill.

Enjoy!
