Summary

Super handy adaptor to push/pull stuff out of hands reach that screws on standard painting pole.

[Gadgets](#) > [Other Gadgets](#)

This is simple attachment that fits on standard painting pole to push and pull stuff that is out of hands reach. i.e. opening/closing high windows, picking fruit out of reach, grabbing stuff from deep in a cupboard. Wifey had used it twice within minutes of me printing it. You will wonder how you ever lived without it.

Print in PETG at 100% infill for maximum strength. Note thread fit is very tight so it won't twist during operation. Sand or dremel the threads if too tight for your needs. Probably should redesign it so doesn't need supports to print but even printing in this orientation was nearly indestructible.

Originally made this for the EV race across Australia to pack and dig out stuff from the charge truck storage compartment like spare truck batteries etc so it is heavy duty. You can see it in action for its original purpose here if you are bored
