Wanted to mount an adxl345 to my SV03. Best place I could think of was the part cooling fan. Mounts to the 4020 blower fan.

Note: you'll have to get longer screws, at least 2mm longer.

update:

after making like 20 different variations with minor changes, finally settled on the chonky one. Sits almost flush with the fan, clears the top perfectly and allows the adxl to sit with the right axes in the right directions. Made it thicker so that it would minimize flex, I think this one finally achieved what I sought out for.
