The one by Diskea was too small and did not fit my Photon Mono 4k with the black plate. Increased the size of the hole by 2mm in blender (have no idea what I'm doing) and hoping this fits.

Edit:

There are two versions of the photon mono 4k. The old version has an angular arm that holds the build plate that is smaller and this object will fit too loose. The newer version has a curve on the top of the arm and is 2mm taller. This object is sized to fit that one.
