Summary

This is a really simple, easy to print, phone mount, with the internal dimensions of 75MM X 13MM.

I made this model since I needed a very specific size, and position for my phone while running octopi4a and still view my print bed. The phone it was originally designed for was an LG Q6 in a phone case. It has a snug fit for any phone with a center fed charge cable, and with the dimensions of 75mmX13mm. it is press fit into the tension holder thing for the axis that the bed moves back and forth on. the stick is offset to the right because that is where the camera is on that specific phone. i might make more with different stick positions later.
