You want it, here is it. Only original in yellow and blue.

You need:

- 2 Bookends with 0,2mm layers, orientation as in real life (sorry, I can't rotate the STL)
- 1 Portal in yellow with 0,1mm layers, flat on print surface
- 1 Portal in blue with 0,1mm layers, flat on print surface
- 1 Person A with 0,2mm layers, flat on print surface
- 1 Person B with 0,2mm layers, flat on print surface

Print with 15% infill and snap the parts together. Designed with appropriate space for PETG between the parts. If you use different material, remember material shrinking and scale accordingly.

As this is based on the emergency exit sign, please see the, well, [emergency sign here](#).

Big thanks to [@Gigglester_252728](#) for providing pictures and valuable feedback. The portal and person have now a slightly better fit.
