You can buy these from me here!

This Skilhunt HB3 headband works great with the mount.

This rotating 3D-printed mount allows you to easily attach and remove your Emisar D4V2 or D1V2 to a headlamp headband. This bracket can be attached anywhere on a headband! Specific mounts designed for the 18650 and 18350 tubes provide maximum flashlight retention.

The 18350 and 18650 holder parts are designed to perfectly fit the D4V2 and D1 18350 and 18650 bodies!

The inner clamp should be printed out of TPU to add some friction.

I used PETG from [California Filament](#) and TPU from Matterhackers.

Screws can be purchased from McMaster-Carr
