Belt tensioner for the X axis of DMS DP5.

Works with the original bearings - I don't know their model - no text on them. You just have to move the original bearings to my tensioner.

You will need a longer belt, 3x M3 nuts and screws.

Screws make contact with the metal rods, so don't worry about damaging your cartage.

P.S. Sorry about the black mess on the part I was oiling some parts and may hands were dirty.
