Another brilliant and groundbreaking design from the person who brought you [The Perfect Bag Clip](#) - presenting, The Perfect Hidden Bookend!

I've spent an incredible amount of time and resources on this design to bring you the best in simple book-alignment and not-falling-off-the-shelf solutions. These bookends are print-in-place, single-piece, optimized geometry, print-speed optimized... and everything else you could want.

Okay, in reality its just a super simple bookend meant to fit in the front cover of a book, and hide underneath - so that your books stay upright

without any obvious mechanism. I've wanted one of these for a while, but its so simple I keep forgetting to just do it - so its solved my problem and hopefully it can fill your needs too!

As always, I'd love to see your makes or remixes of this :)
