This is a clip wich hold front pannel on coolermaster nr200 PC chase.

I redesign it by myself, but it looks like original on this site.

In my disign no parts in the air, you can print it on a side without support.

And differend oval shape for ball clip.

Its easy to print and whatever filament you use for it.

You can print it in different kind of filament lake pla, petg, abs, ppcf30 =)

I printed it in pla, and its works well.
